# MAY 2017 HIGHLIGHTS

## How Things Work

**From Wednesday 10 May at 18:30**

In this fascinating series, venture inside everyday machines and household objects to explore the intricate engineering that helps to shape our day to day lives. From coffee machines to hiking boots, and from digital projectors to air-hockey tables, the exciting animations explode apart these seemingly ordinary devices to reveal their extraordinary secret workings. Each of these hour-long, fast paced episodes lays bare the hidden mechanical anatomy of ten multiple modern machines of all shapes, sizes and utility.

## Street Science

**From Thursday 25 May at 18:30**

Science geek Kevin Delaney steps out of his lab and onto the streets for experiments that are so unusual, off-beat, and so unexpected they are utterly mind blowing! Combining scientific method with curiosity and plain old-fashioned ingenuity, these larger than life demos produce fire, explosions and colourful reactions as Kevin's sidekick Darren Dyk catches it all with amazing slow motion footage that provides insight of what the eye can't normally see. Spellbinding and unique experiments featured in the series include exploring the fiery side of science by making it rain fire and dazzling onlookers with a man-made fire tornado; turning leaf blowers into homemade hovercrafts; impressing a crowd by making an instant nitrogen cloud; and visiting a salon to share a surprising use for their hydrogen peroxide. Never mind the goggles and lab coats – science will never look the same again!

# MAY 2017 HIGHLIGHTS

## Mind Control (Stunt)

**From Monday 1 May at 20:10**

This month, take a closer look at the world of mind control, shining a light on what we are capable of and what humans may be able to do with their minds in the future. First it's time to crank up the imagination in Superhuman Showdown, where the sheer power of the brain is under investigation. And, in the USA Memory Championships, fifty of the country's greatest mental athletes go head to head in a battle of unbelievable mind games. Plus, Mind Control Freaks examines the amazing flexibility of the brain. Can it be controlled to withstand pain, or could a person solve a Rubik's cube without ever trying before? And Deception With Keith Barry delves into the mysteries of the mind and asks how ordinary people can harness their own mental abilities. World renowned mentalist, Keith Barry, applies his mind-bending stage techniques to real-world situations and scenarios.
